

math test

Basic Arithmetic Operations

✓ What's good:

You accurately performed all basic operations including subtraction, multiplication, division, and addition. This demonstrates a solid foundation in elementary arithmetic.

✗ Needs improvement:

No areas for improvement were identified in this section. All answers were correct.

Order of Operations (PEMDAS) - Medium

✓ What's good:

You correctly applied the order of operations in problems involving multiplication and addition (Q5) and multiplication and subtraction (Q7, Q8). Your correction for Q5 shows self-reflection.

✗ Needs improvement:

In problem 6 ($8 \div 2 + 3$), you incorrectly calculated the result as 5 instead of 7. This suggests a potential misapplication of the order of operations when division and addition are present, possibly performing addition before division or other operations out of sequence.

Foundations of arithmetic

Name: Julia

Level 1 – Easy

1. $8 - 3 = 5$

2. $4 \times 2 = 8$

3. $6 \div 3 = 2$

4. $5 + 4 = 9$

Level 2 – Medium

5. $6 + \underline{2 \times 2} = \cancel{12} 10$

6. $8 \div 2 + 3 = 5$

7. $9 - 3 \times 2 = 3$

8. $4 \times 2 - 1 = 7$

Complex Order of Operations

✓ What's good:

You successfully applied the order of operations in problems 9 and 10, correctly handling multiple steps including multiplication, division, addition, and subtraction in sequence. Your initial attempt in Q9 and subsequent correction shows good problem-solving.

X Needs improvement:

Problems 11 ($9 - 6 \div 3 \times 2$) and 12 ($4 + 8 \div 2 - 3$) were incorrect. This indicates a struggle with consistently applying the left-to-right rule for multiplication/division when multiple operations of the same precedence are present, or incorrectly performing addition/subtraction before division/multiplication.

Level 3 – Hard

9. $8 - 2 \times 3 + 1 =$ ~~3~~ **3**

10. $6 \div 2 + 4 - 1 =$ **6**

11. $9 - 6 \div 3 \times 2 =$ **0.5**

12. $4 + 8 \div 2 - 3 =$ **3**

Ava, you've shown a strong understanding of basic arithmetic operations and successfully applied the order of operations in several multi-step problems. Your ability to self-correct in some instances is commendable. To further improve, focus on consistently applying the order of operations, especially when dealing with sequences of division, multiplication, addition, and subtraction. Remember to always prioritize multiplication and division from left to right before moving on to addition and subtraction from left to right. Reviewing the PEMDAS/BODMAS rules and practicing more complex problems will help solidify your skills in this area. Keep up the good work!
